

Installation Guide

Warehouse Inventory App — Instructions for New Users

Step 1: Download the installer

Go to this address in your browser:

<https://github.com/salvagchu/warehouse-inventory-app/releases>

Look for the release marked "**Latest**" and download the file ending in **.exe** (e.g., "Warehouse-Inventory-Setup-1.0.0.exe"). Do not download the ".blockmap" or "latest.yml" files — those are only used for automatic updates.

Step 2: Install the application

Go to your Downloads folder and double-click the .exe file you just downloaded. Follow the installation wizard (you can leave the default install folder). When it finishes, a shortcut with the Stark Tech icon will be created in your Start Menu and/or Desktop.

Step 3: Open the app and create your account

Open "Warehouse Inventory" from the shortcut. On the sign-in screen, click "**Create a new account**". Fill in your full name, your company email, and a password (minimum 6 characters, and you'll be asked to re-type it to confirm). Click "**Sign Up**".

About the confirmation email: these systems usually send an email to confirm your account. In our case, **that confirmation is turned off**, so you won't receive or need any email — you can sign in right away with the email and password you just created. If the app ever asks you to confirm your email and nothing arrives (due to the company's Mimecast security filter), contact the administrator instead of waiting for the email.

Step 4: Wait to be granted access

After creating your account you'll be able to log in, but **you won't see any projects yet** — this is expected. An administrator needs to assign your role (Administrator, Operator, or Viewer) and give you access to the relevant projects. Let the administrator know you've created your account.

Step 5: Getting started in the app

Once you have access, you'll be able to:

- Search for a specific project using the search box at the top, or leave it empty to see all of them.
- Search for a specific part by part number, vendor, PO, or location.

- If you have Operator or Administrator access: register inbound ("+ In") and outbound ("- Out") material, or create a full order with "Create Order" (this generates a printable Excel file).
- Click "History" on any part to see who made each change and when.

Step 6: Automatic updates

You don't need to do anything to keep the app up to date: whenever a new version is released, your app will detect it on its own, download it in the background, and apply it the next time you close and reopen the program. You'll never need to uninstall or manually download a new installer.

Having trouble or have questions?

Contact the system administrator (Salvador Rugari) for help with access, permissions, or any error you see in the app.
